Preface	v
Acknowledgement	vii
List of Tables	xiii
List of Figures	xvii
Chapter 1 General Introduction to Solid Waste Management Systems	1
1.1 Definition of solid waste	3
1.2 Background of solid waste management	3
1.3 Composition of solid waste	8
1.4 Management of solid waste	10
Questions	27
References	27
Chapter 2 Source and Characteristics of Solid Waste	31
2.1 Classification of solid waste	33
2.2 Quantity of solid waste	40
2.3 Composition of solid waste	44
2.4 Physical properties of waste	47
2.5 Mechanical properties of waste	50
2.6 Chemical properties of waste	51
2.7 Method of sampling and measurement	57
2.8 Variations in quantity and composition of solid waste	61
2.9 Forecasting future waste quantities	62
Questions	68
References	68
Chapter 3 Source Reduction, On-Site Processing and Storage of Solid Waste	71
3.1 Introduction	73
3.2 Source reduction	74
3.3 Onsite processing and collection of waste materials	76
3.4 Implementation of source reduction and on-site processing	83
3.5 Calculation of source reduction	85
3.6 On-site storage	87
Questions	98
References	99

Chapter 4	Collection and Transfer of Solid Wastes	101
4.1	Introduction	103
4.2	Classification of collection systems	103
4.3	Point of collection	112
4.4	Frequency of waste collection	115
4.5	Street cleansing	116
4.6	Transfer stations	117
4.7	Collection vehicles	121
4.8	Design of a collection system	133
	Questions	152
	References	152
Chapter 5	Recycling and Reuse	153
5.1	Introduction	155
5.2	Significance	155
5.3	Present practices	157
5.4	Recycling processes	161
5.5	Resource recovery options from organic waste	165
5.6	Material recovery facilities	167
5.7	Full stream processing facilities	167
5.8	Planning for recycling	168
5.9	Recycling performance indicators	170
	Questions	174
	References	175
Chapter 6	Anaerobic Digestion/ Biogasification	177
6.1	Introduction	179
6.2	The mechanism of anaerobic digestion	180
6.3	Kinetics of anaerobic digestion	186
6.4	Environmental factors affecting anaerobic digestion	187
6.5	Other factors influencing anaerobic digestion	188
6.6	Anaerobic treatment processes and present practices	194
6.7	Biogas fertiliser	200
6.8	Economics	200
6.9	Environmental aspects	201
6.10	Utilisation of biogas	202
6.11	Sizing of biogas plants	202
6.12	Biogas technology in Bangladesh	211
	Questions	215
	References	215

Chapter 7	Composting	217
7.1	Introduction	219
7.2	Composting process	222
7.3	Environmental factors affecting composting	226
7.4	Other factors influencing the composting process	232
7.5	Composting methods	233
7.6	Vermicomposting	235
7.7	Barrel composting	240
7.8	Self-turning composting	245
	Questions	249
	References	249
Chapter 8	Thermal Treatment	251
8.1	Introduction	253
8.2	Incineration	253
8.3	Processes of thermal treatment	261
8.4	Pyrolysis	277
8.5	Plasma thermal treatment	280
8.6	Thermal gasification	281
8.7	Energy content of MSW	282
	Questions	286
	References	287
Chapter 9	Land Disposal	289
9.1	Introduction	291
9.2	Landfill classification	293
9.3	Stages of decomposition in a typical landfill	301
9.4	Planning, design and operation of sanitary landfills	305
9.5	Groundwater monitoring and corrective action	332
9.6	Landfill closure and post-closure care	333
9.7	Environmental monitoring	333
9.8	Financial assurance	333
9.9	Landfill completion	333
9.10	After-use of landfill sites	336
9.11	Quantification of leachate	336
	Questions	346
	References	346

Chapter 10 Hazardous Waste Treatment	349
10.1 Definition of hazardous waste	351
10.2 Hazardous waste management	358
10.3 Treatment of hazardous waste	364
10.4 Healthcare waste management	386
Questions	402
References	402
Chapter 11 Integrated Waste Management and Life Cycle Inventory	405
11.1 Introduction	407
11.2 Life cycle inventory	408
11.3 Concept of cradle-to-grave in LCI	409
11.4 Inventory Stage of LCI	411
Questions	413
References	413
Appendix	415
List of Abbreviations	417
